MTH 337, SAMPLE QUIZ #8

Spring 2020
Professor: S. Cassani

Name: _____
(Also print name on back upper right corner of quiz.)

You have 12 minutes to complete the quiz.

Max score: 10

	Python Code	Result	
1		Write the code that takes the string `mystr` separates every word in the list `mylist`. You can assume that all of the words in `mystr` are separated only by the space character	
2		Write the code that given `mylist` from question 1, puts it back together in the original string.	
3		Write the code to replace each `a` and `e` in `mystr` with their upper case version.	
4		Fidn the index where the word 'pippo' appears in `mystr` for the second time.	
5		Write code that opens a text file quiz.txt for reading and prints the first line of this text file.	
6		Write code that opens a text file quiz.txt for reading, reads all the lines and puts them in a list, and then join the lines in a string on the character '&&'	
7		Write code that opens a text file quiz.txt for writring and appends the word 'potato' at the end of the file	
		Total Points:
